

JAEGGLI - MECCANOTESSILE S.r.l.

**LINE COMPOSITION:**

- n=1 Direct Warping machine
- n=1 Continuous Warp-Mercerizing MC-2000 including mercerizing, neutralizing, drying and re-beaming.
- n=3 Beam to Cones Winding machines RS-2000

1 WARPING  
2 MERCERIZING  
3 WINDING

Production Base No.60:  
1800 kg./24h. ca.

Required area:  
1200 sqm. ca.

JAEGGLI - MECCANOTESSILE S.r.l.

## MC - 2000 CONTINUOUS MERCERIZING SYSTEM

The new Continuous Mercerizing System by Jaeggli-Meccanotessile represents a great step forward both in technology and in economics of cotton yarn mercerizing. For the first time ever, the entire process is carried out under full control and survey of the mercerization. Continuous process means higher and constant quality results, better process economics for a quick pay-back, reduction of manual handling and easy process management. With the Beam to Cone Winder type RS-2000 the system also gives the possibility to use the package dyeing in the mercerizing process.
