

JAEGGLI - MECCANOTESSILE S.r.l.

RS - 2000

BEAM TO CONE UNIT

All the new industrial systems made by Jaeggli-Meccanotessile, as the Continuous Mercerizing line MC-2000, the Pad-Batch dyeing line PB-2000 and also the take-up lines from Rope to Beams RB-2000 and from Beam to Beams BB-2000, are completed with the special Beam to Cones Winding machine type RS-2000.

The RS-2000 is composed by a hi-speed beam unwinder feeding the cone-winder with 40 heads from special beams with 40 ends each. The new electronic control system enables to perform the constant winding tension of all the 40 ends, obtaining soft constant density, packages suitable for dyeing or waxed cones ready for knitting, stocking and weaving.
